The Harmful Use of Isolation in Juvenile Facilities: The Need for Post-Disposition Representation

Sandra Simkins*
Marty Beyer**
Lisa M. Geis***

September 2009, the first client referral: three guards escorted sixteen-year-old Troy to the interview. Despite years of experience, I was shocked. In leg-irons and with his hands cuffed behind his back, he wore no real clothes and no prison-issued jumpsuit. His body was covered with a sleeveless thigh-length robe, held together by a few

^{*} Sandra Simkins, Clinical Professor, is the Director of Clinical Programs and Co-Director of the Children's Justice Clinic at Rutgers-Camden School of Law. Professor Simkins is the author of sixteen professional articles related to juvenile justice issues; and has a book under contract, When Kids Get Arrested, What Every Adult Should Know, which was released in 2009. In 2008, she was selected by the MacArthur Foundation to participate in the Models for Change Juvenile Indigent Defense Action Network. Prior to joining the Rutgers faculty in 2006, she spent fifteen years working at the Defender Association of Philadelphia where she was the Assistant Chief of the Juvenile Unit. Sandra is also the co-director of the Northeast Region Juvenile Defender Center, a subsidiary of the National Juvenile Defender Center, where she provides consultation and training to child advocates in Delaware, New York and Pennsylvania.

^{**} Marty Beyer is a juvenile justice and child welfare consultant with a Ph.D. in clinical psychology from Yale University. In addition to assisting states in designing delinquency services, her work with juveniles focuses on how a young person's cognitive, moral and identity development, trauma and disabilities affected the offense and must be considered in designing rehabilitation. She has also assisted with the implementation of strengths/needs-based child welfare practice in several states. Some of her publications can be found on her website MartyBeyer.com.

^{***} Lisa M. Geis is a graduate fellow at Rutgers-Camden School of Law working with the John D. and Catherine T. MacArthur Foundation's Models for Change Juvenile Indigent Defense Action Network. Although she represents juveniles at all levels of the adjudication process, she primarily provides post-disposition representation for youth detained. Lisa participated in the MacArthur Foundation Models for Change initiative in conjunction with New Jersey Office of the Public Defender, working to improve access to legal representation for juveniles at initial detention hearings. Through her work with the Rutgers Children's Justice Clinic, Lisa continues her research on conditions of confinement and the use of isolation in juvenile detention facilities.

facilities, demonstrates that juvenile facilities can manage youth more effectively with treatment instead of isolation, and proposes strategies for the future and suggests how the juvenile defender community might respond.

I. COMPONENTS OF THE POST-DISPOSITION PROJECT AND LEGAL PARAMETERS OF NEW JERSEY POST-DISPOSITION LAW

A. Across a River but a World Apart: New Jersey Juveniles Have Significantly Less Due Process Protections

Prior to coming to New Jersey, I had practiced in Philadelphia,⁷ where there was a legal culture of excellent post-disposition advocacy driven by mandatory six month review hearings.⁸ As a public defender, I was thoroughly taught that some of the most important advocacy happens after the judge makes his disposition ruling. I had seen first-hand how vulnerable children become once they are placed in a facility.⁹ I knew that when judges send children

2012] The Harmful Use of Isolation in Juvenile Facilities

to facilities to "get help," an advocate is essential to make sure that (1) the programs are held accountable and (2) that the rehabilitative needs of the child do not fall through the cracks.

New Jersey is different than Pennsylvania in significant ways in terms of providing post-disposition representation to juveniles. In New Jersey, once a juvenile judge orders a disposition:

- (1) There are no automatic, regularly scheduled review hearings, (regardless of the length of sentence);
- (2) The statewide Office of the Public Defender routinely closes their files (unless an appeal is filed or other specific post-conviction relief is sought); and
- (3) Children are rarely, if ever, visited by lawyers in facilities. 10

Recognizing this important systemic gap in children's access to counsel, the New Jersey statewide Office of the Public Defender and two law school professors submitted a grant proposal to the MacArthur Foundation. The goal of the application was to participate in a National Initiative to enhance legal representation for indigent children and expand the capacity of the Office of the Public Defender. Upon receipt of the JIDAN¹² grant, we created the post-disposition pilot project. In order to expand capacity and enhance representation, the idea was to have juvenile public defenders from two pilot counties refer post-disposition cases to law school clinical programs. The clinical programs would assume post-disposition representation and visit the child while they were in placement. As a result of the post-disposition pilot project, New Jersey children in facilities would have access to lawyers for the first time.

^{7.} From 2001–2006, I served as the assistant chief of the Juvenile Unit of the Defender Association of Pennsylvania. See LAVAL S. MILLER-WILSON & PATRICIA PURITZ, AM. BAR ASS'N, PENNSYLVANIA: AN ASSESSMENT OF ACCESS TO COUNSEL AND QUALITY OF REPRESENTATION IN DELINQUENCY PROCEEDINGS 64 (2003) [hereinafter PENNSYLVANIA ASSESSMENT], available at http://www.jlc.org/files/publications/paassessment.pdf ("Also impressive is the Defender Association's post-disposition advocacy for youth in placement. Despite vast geographical separation from their clients, the Defender Association investigates and monitors the treatment of clients placed in out-of-home facilities.").

^{8. 42} PA. CONS. STAT. § 6353 (2011). The statute states, in relevant part:

No child shall initially be committed to an institution for a period longer than four years or a period longer than he could have been sentenced by the court if he had been convicted of the same offense as an adult, whichever is less. The initial commitment may be extended for a similar period of time, or modified, if the court finds after hearing that the extension or modification will effectuate the original purpose for which the order was entered. The child shall have notice of the extension or modification hearing and shall be given an opportunity to be heard. The committing court shall review each commitment every six months and shall hold a disposition review hearing at least every nine months.

^{10.} New Jersey recognizes that children are entitled to an attorney "at every critical stage" of the delinquency process. N.J. STAT. ANN. § 2A:4A-39(a) (West 2011). Unfortunately, due to the structure of the indigent defense delivery system, public defenders are not contracted to do post-dispositional work. See § 2A:4A-39(a). Most children by their very status are indigent, and most children in the juvenile justice system come from low-income families and qualify for court-appointed counsel. See James Garbarino, Forward: Pathways from Childhood Trauma to Adolescent Violence and Delinquency, in TRAUMA AND JUVENILE DELINQUENCY: THEORY, RESEARCH AND INTERVENTIONS, at XIX, XXI—XXIII (Ricky Greenwald ed., 2002).

This bill recognizes that the public welfare and the best interests of juveniles can be served... while broadening family responsibility and the use of alternative dispositions for juveniles committing less serious offenses. Moreover, the provisions of this bill and the other accompanying bills reflect a philosophy which is *pragmatic and realistic in nature rather than bound to any particular ideology*.

Additional language in the opinion appears to give the judge vast power in order to achieve the rehabilitative purposes of the New Jersey Code.³³ In addition to *C.V.*, there are other cases which emphasize the purpose of the code and the judge's ability to craft an appropriate disposition.³⁴

II. UNDERSTANDING THE USE OF ISOLATION IN JUVENILE FACILITIES—NATIONAL STANDARDS, PSYCHOLOGICAL RESEARCH, JUDICIAL RESPONSE

"It's an awful thing, solitary.... It crushes your spirit and weakens your resistance more effectively than any other form of mistreatment." ³⁵

Despite a Supreme Court ruling made over one hundred years ago³⁶ that deemed the solitary confinement of adult prisoners unconstitutional, the practice of confining a prisoner "alone and removed from sustained contact with other human beings" have continues. Many studies, including one dating back to 1787, 8 have

32. Senate Judiciary Comm., Statement to Assembly, S. 200-641, 1st Sess., at 1 (N.J. 1982).

2012] The Harmful Use of Isolation in Juvenile Facilities

found that solitary confinement in secure facilities is detrimental to the mental and physical health of prisoners. The United Nations Human Rights Committee has found that isolation of prisoners may be considered torture.³⁹ Courts across the United States have ruled that the use of isolation is debilitating and, in some cases, inhuman. For example, it is uncivilized to deprive a person of his clothes⁴⁰ or to isolate a child in a room stripped of everything but a mattress.⁴¹

If the juvenile justice system is designed to be more rehabilitative and less punitive, then how is the use of solitary confinement, segregation, room restriction, or any other means of isolation permitted? We would be outraged if it was found that a parent was confining her child to a small room for days at a time, with minimal human contact, no educational or medical services, and very limited sensory stimuli. Although this scenario would seem to be child abuse, youth in rehabilitate facilities throughout the country are regularly subjected to this kind of treatment.

A. What is Isolation?

Defining Isolation

Juvenile facilities use a variety of terms and acronyms when referring to instances of isolation. Youth placed in secure facilities refer to it as being "put in the box," "lockdown," "seg," or "the hole." In juvenile facility manuals, removal of a juvenile from his cell and separating him from other residents may be referred to as segregation, pre-hearing confinement, protective custody, seclusion, behavior modification unit, close watch, or room restriction, among other things. A Regardless of what a facility's policy and procedure

go to school or receive counseling. See O.S. Recall Motion (on file with author) see the oral surgeon. During these seven days, he was not allowed to contact family or counsel, 147. Thereafter, O.S. remained in his cell for three more days (seven days total), waiting to

juvenile placement due to safety concerns." ¹⁴⁸ The judge, however, refused to hear any testimony, asserting that he did not retain jurisdiction to address the issues raised. The decision was appealed to the appellate division and oral argument was held.

While the appellate decision was pending, O.S. was assaulted again. Facility reports indicate that although O.S. "offered no resistance" he was "extremely bloodied from the assault." Emergency medical treatment confirmed a fractured orbital wall. ¹⁵⁰ An emergency application was filed with the Appellate Division. ¹⁵¹

On April 19, 2011, the Appellate Division panel in an unpublished opinion¹⁵² agreed that the juvenile judge lacked jurisdiction to intervene:

Once the Family Part judge determines that incarceration is the proper disposition, the place of confinement and the day-to-day issues that arise during that confinement, no matter the magnitude of those issues, are not a concern that affects the fundamental decision of whether the needs of the juvenile and the public require incarceration. No matter how O.S. attempts to couch his argument, to do as O.S. suggests inserts the Family Part judge into the day-to-day management of the place of confinement. That is manifestly beyond his authority. ¹⁵³

2012] The Harmful Use of Isolation in Juvenile Facilities

We do not mean to suggest that O.S. is without a remedy to address threats to his personal safety. We have been informed that he and others have filed a complaint in the United States District Court. We simply hold that the Family Part judge does not have the authority under the guise of a recall motion to address whether the facility to which a juvenile has been assigned is appropriate, whether the classification at a facility is appropriate, whether particular sanctions or restrictions are appropriate, or whether the JJC is discharging its serious responsibilities to the juveniles who have been committed to its custody and care. 154

A Petition for Certification to the New Jersey Supreme Court was filed but was unanimously denied. Meanwhile, O.S. is used in other cases to prevent juvenile court judges from hearing recall motions involving safety concerns.¹⁵⁵

In re O.S. disempowers judges. Ignoring the rehabilitative purpose of the New Jersey juvenile code, the plain language of the statutes, and recent case law, In re O.S. holds that a judge must wash his hands once a juvenile is placed with the Juvenile Justice Commission, and cannot intervene, despite evidence of harm to the juvenile. So, the question remains: Given the holding of O.S., what recourse does a juvenile have if he is abused in a New Jersey facility?¹⁵⁶

^{48.} *Id.* at 1

^{149.} Petition for Certification to the New Jersey Supreme Court at exhibit 10-12, New Jersey ex rel. O.S., No. A-5366-09T1, 2011 N.J. Super. Unpub. LEXIS 955 (Apr. 19, 2011) (exhibits on file with authors).

^{152.} Regarding unpublished opinions, N.J. Rule, 1:36-3 states:

No unpublished opinion shall constitute precedent or be binding upon any court. Except for appellate opinions not approved for publication that have been reported in an authorized administrative law reporter, and except to the extent required by res judicata, collateral estoppel, the single controversy doctrine or any other similar principle of law, no unpublished opinion shall be cited to any court by counsel unless the court and all other parties are served with a copy of the opinion and of all other relevant unpublished opinions known to counsel including those adverse to the position of the client.

^{153.} New Jersey *ex rel.* O.S., No. A-5366-09T1, 2011 N.J. Super. Unpub. LEXIS 955, at *7 (Apr. 19, 2011) (emphasis added).

^{154.} *Id.* at *7.

^{155.} In two subsequent client post-disposition issues, in two different counties, O.S. has been relied upon to preclude juvenile court jurisdiction. Juvenile legal files at Rutgers School of Law-Camden, Children's Justice Clinic (on file with author).

administrative remedies and these remedies must be exhausted. For example, under N.J.A.C. 13:95-8.5, a juvenile assigned to a secure facility may make a request for a change in assignment or status by completing a special classification request Form J081 and submitting it to his social worker. The attorney general has also argued that there are civil remedies available. See generally New Jersey ex rel. O.S., No. A-5366-09T1, 2011 N.J. Super. Unpub. LEXIS 955 (Apr. 19, 2011).

The reality is that for children, the only connection they have to the court is their juvenile court judge. As over half of the children in JJC custody have been classified as special education, it is unlikely that they would be able to exhaust the administrative remedies. In addition, as most of the children in juvenile facilities are indigent, is it unlikely that they would have access to a civil lawyer.

IV. STRATEGIES FOR THE FUTURE/RESPONSE OF JUVENILE DEFENDERS

A. Isolation Does Not Have the Purported Benefits of Safety, Punishment, or Deterrence in Juvenile Facilities

"The use of extended isolation as a method of behavior control is an import from the adult system that has proven both harmful and counterproductive when applied to juveniles. It too often leads to increased incidents of depression and self-mutilation among isolated juveniles, while also exacerbating their behavior problems. We know that the use of prolonged isolation leads to increased, not decreased, acting out, particularly among juveniles with mental illness." ¹⁵⁷

Psychiatric facilities for youth have also used isolation for youth who present a danger to themselves or others, but "research has found seclusion to be harmful to patients and not related to positive patient outcomes. . . . There is no . . . theoretical foundation for the use of seclusion with children. Evidence has been building for more than 30 years that the practice of seclusion does not add to therapeutic goals. . . . "158

2012] The Harmful Use of Isolation in Juvenile Facilities

Juveniles isolated for behavior problems tend to be those who are particularly susceptible to harassment and perceived threats because of their past trauma. 159 Because they need acceptance from others, teenagers have more difficulty than adults in ignoring what others say. It is not easy to have high self-esteem or self-confidence when stigmatized by others. When adults do not protect teenagers from being picked on, they are likely to become preoccupied with the unfairness of being mistreated. When teased or when not protected by adults, their behavioral reactions may cause them to be deemed "uncooperative." 160

B. Juvenile Facilities Can Manage Youth More Effectively With Trauma-Responsive Care Instead of Isolation

Traumatized youth typically need nurturing as if they were much younger than their chronological age. However, they may be

closed its isolation unit, despite the objections of staff, and instituted a behavior modification program. The incidence of behavior problems decreased dramatically.

"It is essential for juvenile correctional programs to provide their residents with stimulating recreational programs, educational programs, well-administered behavior management programs and team-generated, individualized service plans ... these recommendations ... improve behavioral management. Administrators who eliminate abusive isolation ... practices find that they are in more control of their programs. It is presumed that their residents recognize this and behave accordingly."

ld.

experience expressing their thoughts and resolving their feelings verbally rather than through victimization. These youth do not see these responses as excessive. They may have little ("Aggressive youth overreact to perceived threat, typically because it is reminiscent of past is personalized, or a form of harassment of them. Any "No" from an adult can be seen as aggression."). Some teenagers who have been victimized in the past react to limit-setting as if it perceived threat, feeling out of control and experiencing primitive and unthinking reflexes. But evaluated from the perspective of each young person at the time he/she felt in danger (no matter Afterwards it may appear that a frightened teenager over-reacted, but the threat can only be person is likely to feel more threatened and likely to be on the alert more than other teens traumatized teenagers. When there is a history of repeated physical and sexual abuse, a young adults view them as difficult and oppositional. Reacting to perceived threats is characteristic of that others say and do. They perceive hostility coming from others, and their reactions make victimization. Some of these youth misinterpret and are offended by relatively benign things these youth are often punished with isolation. their angry outbursts. A traumatized teenager may have no way of responding to harassment or how well-intentioned the adult was). It is not unusual for traumatized youth to be surprised by 159. MICHAEL PUISIS, CLINICAL PRACTICE IN CORRECTIONAL MEDICINE 124 (2d ed. 2006)

reluctant to accept such nurturing because their trust has been violated in the past. Program interventions should be based on an understanding of the role of unresolved trauma in the youth's behaviors. Traumatized youth need to know that they will be protected from harassment or touch; learn to soothe themselves when they become anxious and before those feelings escalate; have help to separate past trauma from present provocations; and understand themselves as victimized rather than as "bad."

Individual trauma treatment (to learn to differentiate mistreatment and loss in the past from limit-setting and teasing in the present) and self-soothing techniques (essential skills) are needed so that traumatized teenagers can avoid reacting to every provocation out of an unresolved pool of anger and hurt. Aggressive young people who overreact must be taught how to hear and observe others differently and to respond without aggression. It takes patient teaching to help youth see that they are misinterpreting what others say and do, and that most people are not hostile towards them. An important aspect of skill-building is learning to use self-calming techniques instead of lashing out. Avoiding power struggles, de-escalation before the youth's behavior gets out of control, learning not to be so rejectionsensitive, and how to handle their anger are crucial elements of caring for traumatized teenagers.

Adult actions can prevent most of their behavior problems. Staff who work with traumatized teenagers require training on how to respond (and not respond) to reactive youth and how to avoid exacerbating their behavior and effectively de-escalating them.

Use of isolation is the result of punitive programming in juvenile facilities. Behavioral problems are typically the focus of institutions rather than residents' underlying sadness, isolation, and sense of loss. Aggressive responses to youth anger and aggression have led to a harmful pathology-oriented, punitive approach in juvenile facilities.

There must be close supervision to assure safety and consequences for rule violations, but the consequences must be seen by residents as fair, or they will be counter-productive. An environment of rigid external control produces chronic crises due to behavior management problems and staff who are frustrated that youth do not improve.

2012] The Harmful Use of Isolation in Juvenile Facilities

The usual adult reaction to adolescent rule violations or other misbehaviors is anger or punishment, which only increases the probability that problem behaviors will continue. Staff can get caught up in residents' aggression. A perceived provocation gets an angry reaction that causes a more aggressive response, and so on, in an escalating cycle.

Avoiding this cycle by preventing confrontation, deescalating provocative situations, and modeling reduced reactivity to insults and threats, creates an environment where staff are not afraid of residents and who do not use physical force against them.¹⁶¹

C. Promising Approaches to reduce reliance on Isolation

on external supports and services as needed, gradually moving focused, trauma responsive continuum of care, wherein youth and order to facilitate an expeditious and successful reintegration to their community supports, and other available community resources in creates a treatment supportive milieu which is designed to ready toward system independence. families are supported in pursuing self-determined goals with reliance homes and neighborhoods. The NY Model thus creates a treatmentthe connections between the youth in care, their family and Model emphasizes establishing (or re-establishing) and maintaining youth for independent, self-regulated and effective behavior. The NY which frequently arise in response to trauma exposure, the NY Model treatment paradigms for the emotional and behavioral problems an environmental and philosophical infrastructure that is both traumajuvenile justice involved adolescents in a variety of settings. By using philosophies that have proven to be effective in working with evidence-based and promising practice programs, treatments and engages rather than punishes youth. The NY Model is a synthesis of informed and trauma-responsive, and applying empirically validated New York State is implementing a juvenile justice approach that

^{161.} Id. at 124-25.

^{162.} Joseph Tomassone, Chief of Treatment of Services, Bureau of Behavioral Health

Dr. Stuart Ablon of Massachusetts General Hospital has developed a program called the "Collaborative Problem Solving Approach" ("CPS") that has demonstrated success in reducing the use of isolation and restraints for juveniles. The premise of the program is that youth lack certain cognitive and social skills and need to be taught to develop those skills. Over-simplified, the approach requires the youth and adult to identify the youth's concern about an issue, then identify the adult's concern, and together brainstorm a way of addressing it. This approach equips youth with the critical skills necessary to overcome the frustration, attention-seeking behaviors, and to limit the testing behaviors. ¹⁶³

This approach was used at the Maine Youth Development Center (which had previously been shut down due to use of four-point restraints and long periods of isolation with young teens). Implementation of CPS in the high custody unit of the Mountain View_Youth Development Center was associated with a significant decrease in the number of assaults, the use of force, placements in seclusion (by at least 50%) and also far less workers' compensation claims due to injury. The CBS approach was also utilized in the Ohio Hospital for Psychiatry. The results were as follows: one year seclusion free, 95% reduction in restraints, staff turnover under 3%. When the CBS approach was used at the Yale-New Haven Children's Hospital Inpatient Psychiatry Unit, restraints dropped from 263 to 7 and seclusion dropped from 432 to 133.

A four-country study recently concluded that seclusion should always be the last resort when it comes to dealing with aggressive episodes involving young offenders with psychiatric disorders. ¹⁶⁴ The forensic units studied ranged from eight to twelve beds, treating young offenders with severe mental health disorders, delinquent, violent and non-compliant behavior and impulse control problems in

Services, Division of Juvenile Justice and Opportunities for Youth, NYS Office of Children and Family Services, *Personal Communication* (forthcoming).

164. Johanna Berg et al., Management of Aggressive Behaviour Among Adolescents in Forensic Units: A Four-Country Perspective, 18 J. OF PSYCHIATRIC AND MENTAL HEALTH NURSING 776-85 (Nov. 2011).

on the units found that the most effective response to problem behaviors was verbal intervention that was clear, structured and used in the early stages of aggression. Sometimes the aggressor was separated from other adolescents for five to fifteen minutes to give them a chance to calm down. Talking about the incident afterwards was also important, so that both the adolescent and staff could reflect on why it happened and how it could be prevented. Teamwork was crucial and all members of the multi-disciplinary team had to be committed to therapeutic aggression management. Staff endeavored to cooperate with the adolescent as long as possible and to avoid coercive measures, while still maintaining the safety of others.

A juvenile facility must have policies that forbid isolation, limit the use of physical restraint and PRN medication for behavior control, and forbid secluding suicidal youth. Not only must the facility train staff in these policies, but it must also coach staff specifically in how to de-escalate easily triggered youth. Just as important is a juvenile institutional environment that is developmentally and trauma-informed where youth feel respected and where restraint is seen as a rare last resort when all other efforts to de-escalate the young person have failed.

D. Strategies for Individual Juvenile Defenders

If your state has mandatory review hearings, bring these issues to the judge's attention at that time and cite the harmful effects of isolation-type practices. If your state does not have mandatory review hearings, but the juvenile court judge retains jurisdiction, it is important to have a mechanism in place for incarcerated youth to have contact with attorneys. An attorney may seek judicial review and appropriate relief by filing a motion to have a review hearing, as was attempted in O.S.

There are additional steps that an individual lawyer concerned about a client can take if he/she suspects institutional abuse or the excessive use of isolation-type practices. The following list was developed by Sue Burrell, from the Youth Law Center in California. Different strategies can be used depending on the seriousness of the

^{163.} ROSS W. GREEN & J. STUART ABLON, TREATING EXPLOSIVE KIDS: THE COLLABORATIVE PROBLEM SOLVING APPROACH (2005) (discussing this approach and its impressive impacts); see also Think: Kids, http://www.thinkkids.org (last visited Feb. 2, 2012).

164. Johanna Berg et al., Management of Aggressive Behaviour Amony Adolescents in

situation. With each strategy, always make sure to tell the child what you plan to do, and make sure that they want you to proceed. 165

(1) Make a Phone Call to the Facility Administrator

This is a good strategy when there is something specific you want to accomplish, such as getting the facility to take your client to a doctor, or arranging a personal visit with someone not on the visiting list. Keep a record of the person(s) you speak with, the date of the phone call, and notes about what was said. Also ask for a return phone call or written response when any requested action is carried out.

(2) Send a Letter or Fax to the Facility Administrator

If the request is urgent, such as a situation where you need to have a mental health clinician examine a child's mental health status, then you may want to fax a written request asking the administrator to investigate and take prompt, appropriate action to address the situation. Faxing has the added advantage of providing a written record of the request. Keep copies of the successful fax. You could also use e-mail, but because administrators get a huge number of e-mails, faxes stand out better as communications calling for a response. If the situation is very serious or if your less formal attempts to resolve them fail, then write a letter to the administrator of the facility asking for an investigation or specific action, outlining what you know about the matter, and request a prompt written response.

(3) Contact the Ombudsperson or Grievance Coordinator

If the request has to do with a relationship issue (for example, trouble with a particular staff member) or particular incident in the facility, then you may want to call the Ombudsperson, or if there isn't one, contact the grievance coordinator for advice.

2012] The Harmful Use of Isolation in Juvenile Facilities

(4) Notify the Licensing or Regulatory Agency

If the facility or placement is licensed, or if there is a regulatory agency, then there may be a complaint process for investigation and action in individual cases. For example, group homes in California are licensed by the California Department of Social Services. Children (or anyone) may file complaints through the Foster Care Ombudsman. ¹⁶⁶ Typically, state law requires investigation and response to occur within a specified period of time, and complaints are retained in the licensing file.

(5) Make a Child Abuse Report

Most states have provisions for the filing of complaints in relation to physical or sexual abuse of children, and this includes abuse by facility staff members or law enforcement officers. These reports may be confidentially filed, and the child welfare agency must respond to them.

(6) Involve Specialty Advocates for Assistance

A disproportionate number of youth in the juvenile justice system have disabilities qualifying them for special education services, or necessitating services for developmental disabilities or mental health conditions. Accordingly, in such cases, contact your local Protection and Advocacy ("P & A") office, or other agencies that provide educational, developmental disabilities and mental health advocacy services.

(7) Contact the Civil Rights Division of the United States Department of Justice

The Civil Rights of Institutionalized Persons Act¹⁶⁷ ("CRIPA") gives the Civil Rights Division of the DOJ the power to bring action

V. CONCLUSION

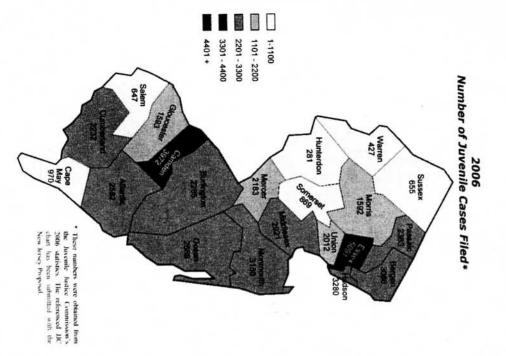

The excessive use of isolation in juvenile facilities is a national problem. There is obvious need for greater oversight, monitoring, and uniform legislation to eliminate this harmful practice. In addition, juvenile systems should explore different approaches such as the CBS approach described above so that the need for isolation in the first instance is reduced. However, in addition to broader, national and systems approaches, there are many actions that individuals can take to protect juveniles.

Courts and human rights organizations have recognized that isolating a person is damaging and can be extremely harmful. Despite the more than two hundred years of research showing that isolation is detrimental to mental health, juvenile facilities across the country regularly employ isolation techniques. While it may be necessary to separate a child from others for a limited time to quell dangerous situations, locking a child in a room for a prolonged period of time only makes the situation worse and exacerbates pre-existing mental health issues.

Isolation of juveniles is used for a variety of reasons, protection, population management, de-escalation of volatile circumstances but it seems to be most often used punitively. Call it segregation, room restriction, behavior modification, or "the box," separating a child from others with little to no external stimuli is in no way rehabilitative. The use of such practices flies in the face of a core objective of our juvenile justice system and must cease.

2012] The Harmful Use of Isolation in Juvenile Facilities

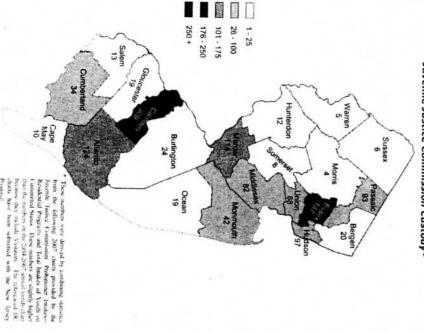

APPENDIX

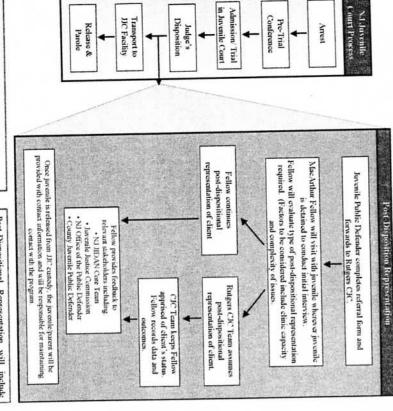

2012]

The Harmful Use of Isolation in Juvenile Facilities

2007 Number of Children Committed to Residential Programs and Juvenile Justice Commission Custody*

New Jersey JIDAN Protocol for Post-Dispositional Representation

Post-Dispositional Representation is critical in order to:

- 1. Ensure compliance with disposition order.
- Ensure appropriate educational and counseling services.
- 3. Ensure appropriate conditions of confinement
- 4. Help client prepare for parole hearing.
- Help client prepare for successful discharge (i.e.: school credit transfer and housing)

Post-Dispositional Representation will include attorney visits with clients who are in secure confinement.

Typical responses to post-dispositional issues include:

- 1. Email or letter to facility administration.
- 2. Notification to client's parent or guardian
- Filing motion in court on client's behalf.
 Letter to DFYS worker or law guardian.
